Professional Summary

Data Science undergraduate at FAST-NUCES specializing in Machine Learning, Data Science, and AI automation. Skilled in implementing ML algorithms from scratch, building data analytics platforms, and deploying end-to-end n8n automation pipelines.

Technical Skills

- **Languages:** Python, C++, SQL, HTML/CSS, Assembly
- **Machine Learning / DL:** Scikit-learn, TensorFlow, NumPy, Pandas, Neural Networks, Deep Learning
- **Data & Visualization:** PostgreSQL, Matplotlib, Seaborn, Jupyter Notebook, Google Colab
- **Automation & AI Agents:** n8n, Make.com, REST APIs, Webhooks, Pinecone, AI Agents
- **DevOps / Tools:** Git, GitHub, Docker, Linux, Arduino, Raspberry Pi

Education

FAST NUCES Islamabad campus **2024 – Present**
BS Data Science (PF: B, OOP: B , DSA: B+ , Intro to DataScience: B) CGPA: 3.0 / 4.0

Projects

ML Algorithms from Scratch *Python, NumPy*

- Needed deep ML intuition without relying on black-box libraries during coursework.
  Implement core ML algorithms from scratch, including full forward and backpropagation.
- Built Linear/Logistic Regression, K-Means, Decision Trees, and a Neural Network from scratch using NumPy.
  Breast cancer classification with logistic regression, House prediction System and Indian Startup fund analysis.

OncoPredict AI Web Application *Python, Flask, Scikit-learn, JavaScript, Railway, Vercel*

- Trained ML models lacked real-world usability, as users could not interact with predictions through a practical interface.
  Build a full end-to-end system of Breast Detection Classification to transform a trained model into a user-interface web application.
- Developed a Flask API with feature scaling, integrated it with a responsive frontend using JavaScript and REST APIs.
  Enabled real-time predictions and deployed the system using Railway and Vercel for public access.

RideFlow – Ride-Hailing Web Application *Node.js, Express, MySQL, JWT, HTML/CSS/JS*

- Needed a capstone that demonstrated advanced SQL concepts beyond basic CRUD.
  Design a full-stack ride-hailing platform with multi-role access and a rich database layer.
- Built Rider/Driver/Admin roles with JWT auth, 30+ REST endpoints, 7 triggers, and stored procedures.
  Delivered live dashboards, surge pricing, auto-suspensions, and promo reports as a top DB project.

n8n Automation Pipelines *n8n, REST APIs, Pinecone, Make.com, AI Agents*

- Repetitive tasks like content creation, email triage, and customer support consumed significant daily time.
  Design and deploy scalable automation workflows to eliminate manual effort across multiple domains.
- Built 10+ pipelines: LinkedIn content creator, email filter, AI support agent, and Pinecone knowledge pipeline.
  Saved hours weekly, earned NATE n8n certification, and ran workflows reliably across multiple clients.

Movie Data Manager *C++, DSA – Trees, Linked Lists, Sorting*

- Managing a large movie dataset required efficient organization beyond simple arrays or files.
  Design a console-based system using advanced data structures for fast search and retrieval.
- Implemented BST indexing, linked-list storage, and multiple sorting algorithms in a C++ console app.
  Delivered sub-linear search times; recognized as a strong DSA course project.

Certifications

- **Machine Learning Specialization** (3 courses) – Andrew Ng, DeepLearning.AI / Coursera 15 Feb-2026
- **Deep Learning Specialization** – Neural Networks & Deep Learning (Course 1) – DeepLearning.AI 8 March-2026
- **Data Science Mentorship Program** – CampusX November-2025
- **n8n Automation Certification** – NATE August-2025
- **AI RC Car Build Certificate** – LinkedIn Verified November-2025

Experience

Technical Lead | *Google Developer Student Club – FAST* **2024 – 2025**

- Led technical direction and organized developer workshops, mentoring peers in modern tools and best practices.
- Evaluated technology stacks for club initiatives and facilitated hands-on coding sessions and hackathon preparation.
