Professional Summary

Data Science undergraduate at FAST-NUCES with hands-on experience as an AI Engineer building LLM-powered voice AI and workflow automation platforms. Skilled in deep learning, end-to-end ML deployment, and scalable n8n/API-driven automation pipelines.

Technical Skills

- **Languages:** Python, C++, SQL, MongoDB, HTML/CSS, Assembly
- **Machine Learning / DL:** Scikit-learn, TensorFlow, NumPy, Pandas, Neural Networks, Deep Learning
- **Data & Visualization:** PostgreSQL, Matplotlib, Seaborn, Jupyter Notebook, Google Colab
- **Automation & AI Agents:** n8n, Make.com, REST APIs, Webhooks, Pinecone, AI Agents
- **DevOps / Tools:** Git, GitHub, Docker, Linux

Education

FAST NUCES Islamabad campus **2024 – Present**
BS Data Science (PF: B, OOP: B, DSA: B+, OS: B+, DB: B-, IDS: B)

Projects

Brain Tumor MRI Classification – Transfer Learning *Python, TensorFlow/Keras, Streamlit*
github.com/Sami-Shahid-001/brain-tumor-classification-mri-transfer-learning-cnn

- A custom CNN reached strong validation accuracy but generalized poorly, scoring only 63% on unseen MRI scans. Improve real-world generalization of a 4-class brain tumor classifier (glioma, meningioma, pituitary, no tumor).
- Applied transfer learning using a pretrained CNN backbone, then fine-tuned upper layers and deployed the model via Streamlit.
  Raised unseen test accuracy from 63% to 74%, with glioma classification remaining the toughest class to predict.

OncoPredict AI Web Application *Python, Flask, Scikit-learn, JavaScript, Railway, Vercel*

- Trained ML models lacked real-world usability, as users could not interact with predictions through a practical interface. Build a full end-to-end system of Breast Detection Classification to transform a trained model into a user-interface web application.
- Developed a Flask API with feature scaling, integrated it with a responsive frontend using JavaScript and REST APIs. Enabled real-time predictions and deployed the system using Railway and Vercel for public access.

RideFlow – Ride-Hailing Web Application *Node.js, Express, MySQL, JWT, HTML/CSS/JS*

- Needed a capstone that demonstrated advanced SQL concepts beyond basic CRUD.
  Design a full-stack ride-hailing platform with multi-role access and a rich database layer.
- Built Rider/Driver/Admin roles with JWT auth, 30+ REST endpoints, 7 triggers, and stored procedures.
  Delivered live dashboards, surge pricing, auto-suspensions, and promo reports as a top DB project.

n8n Automation Pipelines *n8n, REST APIs, Pinecone, Make.com, AI Agents*

- Repetitive tasks like content creation, email triage, and customer support consumed significant daily time.
  Design and deploy scalable automation workflows to eliminate manual effort across multiple domains.
- Built 10+ pipelines: LinkedIn content creator, email filter, AI support agent, and Pinecone knowledge pipeline.
  Saved hours weekly, earned NATE n8n certification, and ran workflows reliably across multiple clients.

Ferra – White-Label AI Voice Agent Platform *Voice AI, LLM APIs, REST APIs, Multi-Tenant SaaS*

- Businesses needed always-on AI phone agents but lacked the infrastructure to build, bill, and resell voice AI.
  Build a no-code, white-label voice AI platform with pay-as-you-go calling, reseller branding, and an affiliate program.
- Built AI voice agent workflows on LLM/voice APIs (ElevenLabs, Deepgram, OpenAI) for real-time calls, engineered a pay-as-you-go pricing engine, and designed multi-tenant white-label sub-accounts with isolated billing.
  Shipped a production platform with unlimited AI agents, 8,000+ app integrations (Zapier, Make, n8n), omnichannel voice/SMS/WhatsApp, and a 20% lifetime-commission affiliate program.

Certifications

- **Machine Learning Specialization** (3 courses) – Andrew Ng, DeepLearning.AI / Coursera 15 Feb-2026
- **Deep Learning Specialization** – Neural Networks & Deep Learning (Course 1) – DeepLearning.AI 8 March-2026
- **Data Science Mentorship Program** – CampusX November-2025
- **n8n Automation Certification** – NATE August-2025

Experience

AI Engineer | *Syntrova AI Solutions* **17 May – 18 Jul 2026**

- Built and maintained AI voice agent workflows for Ferra, the company's no-code white-label voice AI platform.
- Integrated LLM and voice APIs (ElevenLabs, Deepgram, OpenAI) with REST endpoints to power real-time inbound/outbound calling, CRM sync, and multi-channel automation.

Technical Lead | *Google Developer Student Club – FAST* **2024 – 2025**

- Led technical direction and organized developer workshops, mentoring peers in modern tools and best practices.
- Evaluated technology stacks for club initiatives and facilitated hands-on coding sessions and hackathon preparation.
